

ROME, 1-2 OCTOBER 2026

INNOVATION, RELIABILITY, SUSTAINABILITY: ALL ROADS LEAD TO **STEEL**

The **Italian Steel Construction Days** will be held in **Rome** at the beginning of October 2026, in the prestigious location of the **Fontana di Trevi Conference Center**, in the historic heart of the capital.

It will be an opportunity to bring together the three pillars of the CTA (Italian College of Steel Technicians): Consultants, Academics, Industry with institutional and international guests to analyze the present and build the future of metal structures.

The College of Steel Technicians has the pleasure to invite all interested parties to participate in the Congress to discuss and develop these topics together.

The conference language will be both Italian and English, with the specificity this year to have a continuous program of keynote speeches and parallel session in English so that also international speakers can contribute and participate proficiently.

CALL FOR ABSTRACTS:

The deadline for submitting the abstracts is **31.01.2026**

Starting with this edition it will be possible for scientific papers in English to request inclusion in a digital volume published by SPRINGER Nature and indexed in scientific databases, to ensure greater international visibility for the presented works.

The template and electronic submission instructions are available at:

<https://meteor.springer.com/CTA2026>

For papers not intended for inclusion in the indexed digital volume, please send the abstract to: cta@ctanet.it

AD MAIORA!

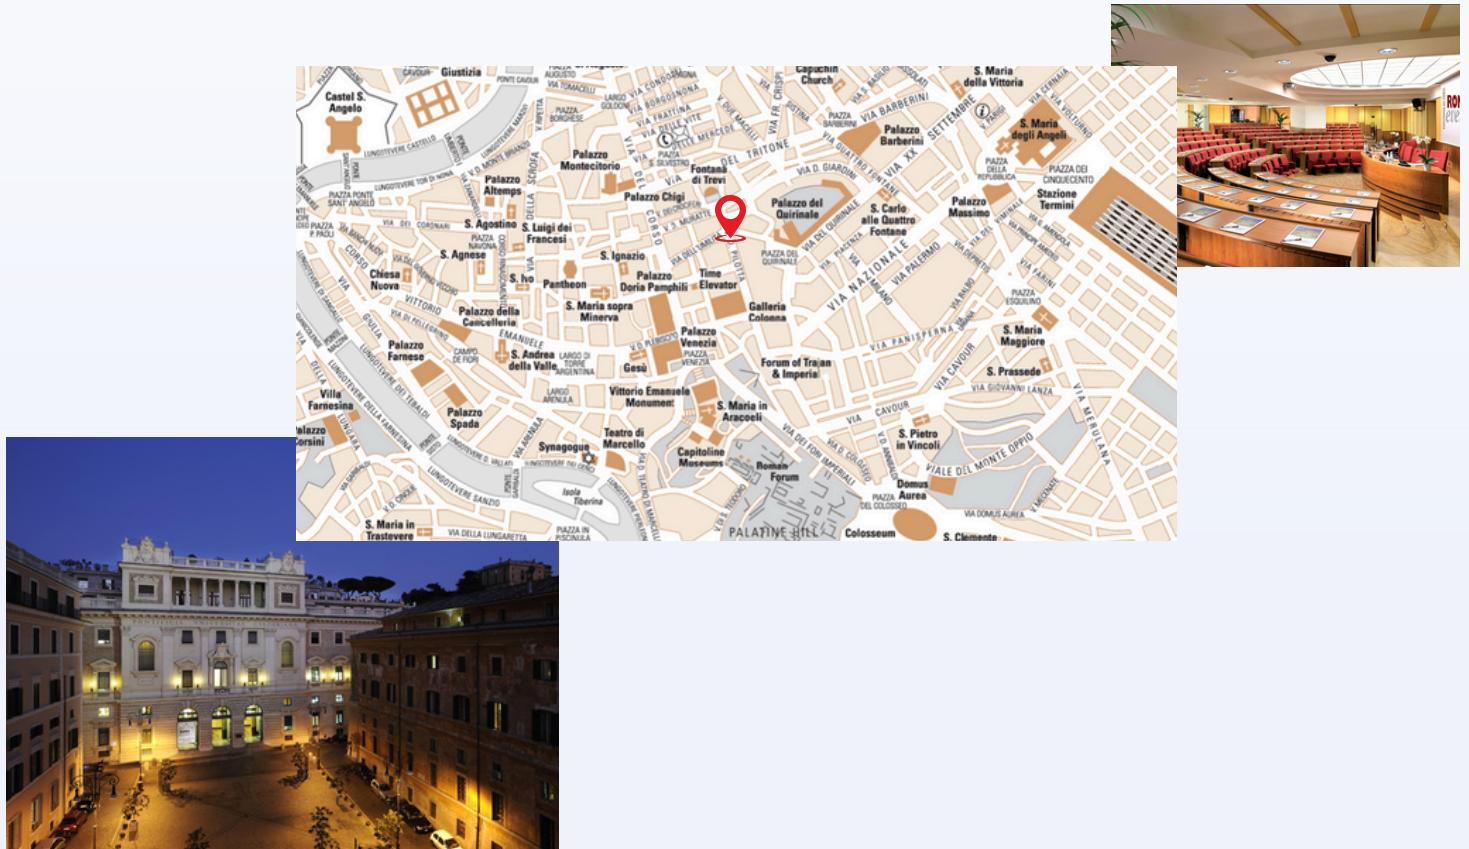

Submit to CTA 2026

30 CONGRESSO CTA

The conference will be held at the Fontana di Trevi Conference Center, in the heart of the capital. Evening activities are planned in the historic center, at short distance from the Conference Center.

Conference Topics Include:

- Steel and Aluminum Structures: realized projects, research, standards
- Infrastructure, bridges, geotechnical works
- Tall buildings, industrial buildings, energy plants, special works
- Seismic design – Isolation and dissipation
- Fire resistance design and other exceptional actions
- Steel-concrete and steel-timber structures
- Advanced structural analysis and use of calculation codes
- Fatigue design and welding technology – Fabrication, erection
- Existing bridges and buildings: Maintenance and monitoring
- Corrosion and durability – Sustainability of metal constructions
- Reuse and circularity of materials and structures

There will also be special sessions in collaboration with other associations active in engineering, such as the construction of a pedestrian bridge in Rwanda with Bridges to Prosperity co-financed by the CTA, and a focus on wind-exposed structures in collaboration with the National Association of Wind Engineering (ANIV).
